## Introduction

This summary supersedes the recently issued preliminary report on Pacific Coast canned fruit prices and shipments.<sup>1/</sup> The earlier report included estimated preliminary data on canners' shipments for 1963-64 and was issued to provide the industries with the latest available information. This report includes, and is based on, final and complete data on f.o.b. prices and movements of the various fruits. Where final or complete data are not available (exports), estimates are provided and used in this report. The results and data presented here are issued to provide the industry and governmental and private marketing organizations with materials used in the discussion and formulation of marketing policies, plans, and programs.

The report first presents summary highlights on the industry average f.o.b. price experience and on the f.o.b. shipments by canners during 1963-64. Then are summarized economic-statistical relationships of the average f.o.b. prices to major market influences for canned cling peaches, pears, freestone peaches, and apricots. Sources of the data and their characteristics are noted before the industry statistics are given in tables which incorporate the basic data and the results of the f.o.b. price analyses.

---

<sup>1/</sup> Sidney Hoos and George M. Kuznets, Preliminary Report--Pacific Coast Canned Fruits, F.O.B. Price Relationships, 1963-64 (Berkeley: California Agricultural Experiment Station, June 10, 1964), 34p.

F.O.B. Prices and Movement, 1963-64

The f.o.b. prices which reflect the average industry experience during the 1963-64 marketing year are summarized as follows:

Canned fruit	1963-64 average f.o.b. prices dollars per case; 24 No. $2\frac{1}{2}$ basis
California cling peaches (choice, No. $2\frac{1}{2}$ )	4.87
California apricots (choice, No. $2\frac{1}{2}$ )	5.30
Pacific Coast pears (choice, No. $2\frac{1}{2}$ )	7.60
Pacific Coast Elberta freestone peaches (fancy, No. $2\frac{1}{2}$ )	6.00
California fruit cocktail (choice, No. $2\frac{1}{2}$ )	6.50
Hawaiian pineapple (fancy, sliced, No. $2\frac{1}{2}$ , f.o.b. San Francisco)	8.50

The estimated movement of canned fruit from canners during 1963-64 is given in detail in the appended tables. But the following table presents the indicated summary results.

Canned fruit	1963-64 movement from canners		
	Total	Commercial	Domestic commercial
	thousands of cases; 24 No. $2\frac{1}{2}$ basis		
California cling peaches	25,723	24,526	19,626
California apricots	4,417	4,094	3,914
Pacific Coast pears	6,643	6,143	5,993
Pacific Coast freestone peaches	5,415	5,093	5,093
California fruit cocktail	12,706	12,348	9,598

Also, it is estimated that some 13,186,000 cases (24 No.  $2\frac{1}{2}$  basis) of pineapple moved into trade channels through packers' and importers' shipments for domestic civilian consumption.

### F.O.B. Price Relationships

In addition to providing the basic marketing information summarized above and in the attached tables, this report presents the results of statistical analyses of the major factors which are related to the industry average f.o.b. prices of canned cling peaches, pears, apricots, and freestone peaches. The major price-affecting factors include the commercial movement from canneries, the level of national disposable personal income, and the relative level of prices of canned fruits competing with the respective canned fruits. Those price-influencing factors are shown in tables appended to this report. The f.o.b. price relationships may be summarized as follows:

#### Canned Cling Peaches

A change of 10 percent in the total commercial or domestic commercial movement (24 No.  $2\frac{1}{2}$  basis) of California canned cling peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 3 percent in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of canned cling peaches.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 12 percent in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of canned cling peaches.

A change of 10 percent in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 11 percent in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of canned cling peaches.

Differences between the actual f.o.b. prices of canned cling peaches (choice, No.  $2\frac{1}{2}$ ) and those accounted for by the statistical analysis are given in Table 5 of this report.

### Canned Pears

A change of 10 percent in the commercial domestic movement (24 No.  $2\frac{1}{2}$  basis) of Pacific Coast canned pears, considered by itself, was on the average accompanied by a change in the opposite direction of about 3 percent a case in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of Pacific Coast canned pears.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 13 percent a case in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of Pacific Coast canned pears.

A change of 10 percent in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 11 percent a case in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of Pacific Coast canned pears.

Differences between the actual f.o.b. prices of Pacific Coast canned pears (choice, No.  $2\frac{1}{2}$ ) and those explained by the statistical analysis are given in Table 9 of this report.

### Canned Apricots

A change of 10 percent in the commercial domestic movement (24 No.  $2\frac{1}{2}$  basis) of California canned apricots, considered by itself, was on the average accompanied by a change in the opposite direction of about 3 percent in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of canned apricots.

A change of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by a change in the same direction of about 8 percent in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of canned apricots.

A change of 10 percent in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 7 percent in the f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of canned apricots.

Differences between the actual f.o.b. prices of canned apricots (choice, No.  $2\frac{1}{2}$ ) and those explained by the statistical analysis are given in Table 13 of this report.

#### Canned Freestone Peaches

A change of 500,000 cases in the commercial domestic movement (24 No.  $2\frac{1}{2}$  basis) of Pacific Coast canned freestone peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 41 cents a case in the f.o.b. price (fancy, No.  $2\frac{1}{2}$ ) of Pacific Coast canned freestone peaches.

An increase of 10 percent in the index of disposable income, considered by itself, was on the average accompanied by an increase of about 54 cents a case in the f.o.b. price (fancy, No.  $2\frac{1}{2}$ ) of Pacific Coast canned freestone peaches.

A change of 10 points in the adjusted index of prices of competing canned fruits, considered by itself, was on the average accompanied by a change in the same direction of about 26 cents a case in the f.o.b. price (fancy, No.  $2\frac{1}{2}$ ) of Pacific Coast canned freestone peaches.

A change of 500,000 cases in the indicator of other supply (24 No.  $2\frac{1}{2}$  basis) of canned freestone peaches, considered by itself, was on the average accompanied by a change in the opposite direction of about 18 cents a case in the f.o.b. price (fancy, No.  $2\frac{1}{2}$ ) of Pacific Coast canned freestone peaches.

Differences between the actual f.o.b. prices of Pacific Coast canned freestone peaches (fancy, No. 2 $\frac{1}{2}$ ) and those accounted for by the statistical analysis are given in Table 17 of this report.

The user's attention is invited to some innovations introduced in the analyses summarized in this issue of the report. These innovations reflect economic-statistical investigations carried on to improve the adequacy and usefulness of the report. For California canned cling peaches, f.o.b. total commercial movement is introduced as a determining variable. The use of f.o.b. total commercial movement (which includes exports) in place of f.o.b. domestic commercial movement (which excludes exports) is called for in view of the significant volume of exports in recent years. For Pacific Coast canned freestone peaches, as a determining variable, there has been introduced an "other supply indicator" reflecting the canned pack of canned freestone peaches in states other than the Pacific Coast.

#### Data

Although the sources of the data on which this report is based are indicated in the footnotes of the various tables, the following supplementary explanations may be noted for the 1963-64 prices, movement data, and other economic information used in the analyses.

The f.o.b. prices of cling peaches, pears, freestone peaches, fruit cocktail, and apricots are industry average prices reflecting cannery operations. The f.o.b. prices for canned pears and freestone peaches reflect operations of canneries in the Pacific Northwest as well as in California. The canned pear and freestone peach prices for the Northwest were collected through the Northwest Canners and Freezers Association and for California were collected through the Canners League of California. The 1963-64 price data for cling peaches and

fruit cocktail were collected through the Cling Peach Advisory Board, and the prices for canned apricots were collected through the Canners League of California. The price data for Hawaiian pineapple are based on published quotations supplemented by trade information.

The data on canner stocks and movement are based on reports issued by the following agencies: for cling peaches and fruit cocktail, the Cling Peach Advisory Board; for apricots, California canned pears, and California canned freestone peaches, the Canners League of California; and for Northwest canned pears and freestone peaches, the Northwest Canners and Freezers Association. The movement data for canned pineapple were derived from trade sources.

The index of United States disposable personal income is based on reports issued by the U. S. Department of Commerce. The levels of competing canned fruit prices for each of the fruits are measured by indexes constructed as indicated in Tables 6, 10, 14, and 18 appended to this report. Exports are based on U. S. Department of Commerce reports, and United States government purchases are based on releases issued by the U. S. Departments of Agriculture and Defense.

TABLE 1

F.O.B. Prices<sup>a/</sup> of Canned Fruits, from 1924-25

Marketing year, June through May	California cling peaches (choice, No. 2 $\frac{1}{2}$ )	California apricots (choice, No. 2 $\frac{1}{2}$ )	Pacific Coast pears (choice, No. 2 $\frac{1}{2}$ )	Pacific Coast freestone peaches (fancy, No. 2 $\frac{1}{2}$ )	California fruit cocktail (choice, No. 2 $\frac{1}{2}$ )	Hawaiian pineapple (sliced, fancy, No. 2 $\frac{1}{2}$ ) f.o.b. 1963-64	4.87	5.30	7.60	6.00	6.50	8.50

a/ Based on weighted average cannery f.o.b. sales prices (for cling peaches, apricots, pears, freestone peaches, and fruit cocktail) determined from cannery reports on their billings and invoices of sales f.o.b. cannery or dock (including brokerage, cash discount, swell, label, and case allowances but excluding any special or trade discounts and any prepaid charges included in delivery prices such as freight and marine insurance). Prices adjusted to an industry-wide common or nondifferentiated basis by modification for recognized price premium conventional for certain brands.

## Sources:

Col. 1: F.o.b. prices (other than clings) in Table 1 weighted by corresponding domestic commercial shipments in Table 2.

Col. 2: Figures in column 1 expressed as percentages with 1947-48 to 1949-50 = 100.

Col. 3: Based on income data in U. S. Department of Commerce, Survey of Current Business (second quarter, 1964, estimated).

Col. 4: Figures in column 3 expressed as percentages with 1947-48 to 1949-50 = 100.

Col. 5: Column 2 as percent of column 4.

Note for Canned Cling Peaches

With price as the dependent variable and the other variables below considered as the determining variables, regression equations fitted by the method of least squares to the series covering the years 1924-25 through 1963-64 (excluding 1941-42 through 1946-47) are:

$$(1) \quad Y' = -11.7054 - 0.1996(X_1) + 3.6591(\log_e X_3) + 0.0207(X_4); \quad R = 0.95$$

(4.053) \quad (11.746) \quad (4.276)

$$(2) \quad (\log_e Y)' = -8.5795 - 0.2954(\log_e X_1) + 1.1975(\log_e X_3) + 1.1798(\log_e X_4);$$

(4.173) \quad (20.514) \quad (11.836)

$$R = 0.98$$

$$(3) \quad Y' = -12.4542 - 0.1664(X_2) + 3.7597(\log_e X_3) + 0.0227(X_4); \quad R = 0.98$$

(7.989) \quad (17.226) \quad (7.274)

$$(4) \quad (\log_e Y)' = -8.0731 - 0.2890(\log_e X_2) + 1.1511(\log_e X_3) + 1.1202(\log_e X_4);$$

(3.367) \quad (18.310) \quad (9.395)

$$R = 0.98$$

$Y$  is the annual average f.o.b. price (choice, No. 2½) of California canned cling peaches (dollars per case), Table 4, column 1.

$X_1$  is the canners' commercial domestic movement of California canned cling peaches (in units of 1 million cases), Table 4, column 2.

$X_2$  is the canners' commercial movement of California canned cling peaches (in units of 1 million cases), Table 4, column 3.

$X_3$  is the index of United States disposable personal income (1947-48 to 1949-50 = 100), Table 4, column 4.

$X_4$  is the adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 4, column 5.

The numbers in parentheses are t-ratios for the regression coefficients, and  $R$  is the coefficient of multiple correlation.

a/ Preliminary; subject to revision.

Sources:

Col. 1: F.o.b. prices (other than pears) in Table 1 weighted by corresponding shipments in Table 2.

Col. 2: Figures in column 1 expressed as percentages with 1947-48 to 1949-50 = 100.

Col. 3: Based on income data in U. S. Department of Commerce, Survey of Current Business (second quarter, 1964, estimated).

Col. 4: Figures in column 3 expressed as percentages with 1947-48 to 1949-50 = 100.

Col. 5: Column 2 as percent of column 4.

Note for Canned Pears

With price as the dependent variable and the three other variables below considered as the determining variables, regression equations fitted by the method of least squares to the series covering the years 1926-27 through 1963-64 (excluding 1940-41 through 1947-48) are:

$$(1) \quad Y' = -14.7968 - 0.7282(X_1) + 4.9632(\log_e X_3) + 0.0164(X_4); \quad R = 0.97$$

(6.939)      (9.115)      (2.049)

$$(2) \quad (\log_e Y)' = -8.6061 - 0.3113(\log_e X_1) + 1.2738(\log_e X_3) + 1.0997(\log_e X_4);$$

(5.325)      (18.961)      (9.107)

$$R = 0.99$$

$Y$  is the annual average f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of Pacific Coast canned pears (dollars per case), Table 8, column 1.

$X_1$  is the canners' commercial domestic movement of Pacific Coast canned pears (in units of 1 million cases), Table 8, column 2.

$X_3$  is the index of United States disposable personal income (1947-48 to 1949-50 = 100), Table 8, column 3.

$X_4$  is the adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 8, column 4.

The numbers in parentheses are t-ratios for regression coefficients, and

$R$  is the coefficient of multiple correlation.

Col. 3: Based on income data in U. S. Department of Commerce, Survey of Current Business (second quarter, 1964, estimated).

Col. 4: Figures in column 3 expressed as percentages with 1947-48 to 1949-50 = 100.

Col. 5: Column 2 as percent of column 4.

### Note for Canned Apricots

With price as the dependent variable and the three other variables below considered as the determining variables, regression equations fitted by the method of least squares to the series covering the years 1924-25 through 1963-64 (excluding 1941-42 through 1946-47) are:

$$(1) \quad Y' = -6.8218 - 0.6190(X_1) + 2.7197(\log_e X_3) + 0.0127(X_4); \quad R = 0.94$$

(4.683)      (9.828)      (3.164)

$$R = 0.96$$

Y is the annual average f.o.b. price (choice, No.  $2\frac{1}{2}$ ) of California canned apricots (dollars per case), Table 12, column 1.

$X_1$  is the cannery commercial domestic movement of California canned apricots (in units of 1 million cases), Table 12, column 2.

$X_3$  is the index of United States disposable personal income (1947-48 to 1949-50 = 100), Table 12, column 3.

$X_4$  is the adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 12, column 4.

The numbers in parentheses are t-ratios for regression coefficients, and R is the coefficient of multiple correlation.

(Continued on next page.)

TABLE 15--continued.

a/ Preliminary; subject to revision.

b/ No exports of canned freestone peaches are reflected; exports of all canned peaches are considered as clings, since no breakdown between exports of clings and frees is available.

c/ For the prewar years, the only Northwest data available are packs (in actual cases), and they are combined with California data ( $2\frac{4}{5}$  No.  $2\frac{1}{2}$  basis) to derive estimated Pacific Coast data. For the postwar years, however, Pacific Coast reflects combined data ( $2\frac{4}{5}$  No.  $2\frac{1}{2}$  basis) on packs and canners' stocks for California and the Northwest.

Sources: Canners League of California, Northwest Canners and Freezers Association, and U. S. Departments of Agriculture and Defense.

Note for Canned Freestone Peaches

With price as the dependent variable and the other variables below considered as the determining variables, regression equations fitted by the method of least squares to the series covering the years 1934-35 through 1963-64 (excluding 1941-42 through 1946-47) are:

$$(1) \quad Y' = -19.5411 - 0.8255(X_1) + 5.5380(\log_e X_3) + 0.0265(X_4) - 0.3659(X_5); \\ (7.186) \quad (12.411) \quad (3.717) \quad (3.581)$$

R = 0.98

$$(2) \quad (\log_e Y)' = -10.8169 - 0.0488(\log_e X_1) + 1.3094(\log_e X_3) + 1.4441(\log_e X_4) - \\ (1.089) \quad (12.865) \quad (11.498) \\ 0.0336(\log_e X_5); \quad R = 0.98 \\ (2.105)$$

Y is the annual average f.o.b. price (fancy, No. 2<sup>1</sup>/<sub>2</sub>) of Pacific Coast canned freestone peaches (dollars per case), Table 16, column 1.

X<sub>1</sub> is the canners' commercial domestic movement of Pacific Coast canned freestone peaches (in units of 1 million cases), Table 16, column 2.

X<sub>3</sub> is the index of United States disposable personal income (1947-48 to 1949-50 = 100), Table 16, column 3.

X<sub>4</sub> is the adjusted index of prices of competing canned fruits (1947-48 to 1949-50 = 100), Table 16, column 4.

X<sub>5</sub> is the two-year moving summation of pack of freestone peaches in other states (in units of 1 million cases), Table 16, column 5.

The numbers in parentheses are t-ratios for regression coefficients, and

R is the coefficient of multiple correlation.
